

WHAT IS CLAIMED IS:

1. An information card comprising:  
a conductive external panel;  
a ground member that is integral with said external panel; and  
a circuit substrate having a ground conductor portion;  
wherein  
said ground member is connected to said ground conductor portion of said circuit substrate contained in the information card and is externally exposed.
2. An information card according to Claim 1, wherein the ground member spring-contacts the ground conductor portion of the circuit substrate.
3. An information card according to Claim 1, wherein the external panel is made of a nickel clad stainless steel material.
4. An information card according to Claim 1, wherein said ground member is connected to said ground conductor portion of said circuit substrate via through-holes provided in said ground conductor portion.

TO BE FORWARDED TO THE PATENT OFFICE

5. An information card according to Claim 1, further comprising seat members provided on an upper surface of said circuit substrate, wherein said ground member spring-contacts said seat member.

6. An information card according to Claim 1, wherein said ground member includes plural contacts which are exposed at the upper side of said external panel via windows provided in said external panel.

7. An information card comprising:  
a conductive external panel; and  
a connector contained in the information card including an external conductor; wherein  
an inner side of said conductive external panel electrically contacts an outer side of said external conductor of said connector contained in the information card so as to be connected to each other.

8. An information card according to Claim 7, wherein the external panel is made of a nickel clad stainless steel material.

9. An information card comprising:  
a conductive external panel; and

a circuit substrate having a ground conductor portion;  
wherein

said conductive external panel electrically contacts  
said ground conductor portion of said circuit substrate  
contained in the information card so as to be connected to  
each other.

10. An information card according to Claim 9, wherein  
the external panel is made of a nickel clad stainless steel  
material.

11. An information card comprising:

a frame;

a conductive external panel mounted on the frame;

a circuit substrate contained in the information card  
and having a ground conductor portion;

a pair of ground members for covering a pair of the  
edges opposed to each other of a frame of the information  
card, the ground members being integral with said conductive  
external panel; wherein

said conductive external panel is electrically  
connected to said ground conductor portion of said circuit  
substrate contained in the information card, said ground  
members having hook portions opposed to each other in the  
ends of the ground members, and the tips of the hook

portions having an interval shorter than the width of the frame.

12. An information card according to Claim 11, wherein the external panel is made of a nickel clad stainless steel material.

13. An information card according to Claim 11, wherein the ground members cover substantially all of at least one of the pair of edges opposed to each other of the frame.

14. An information card according to Claim 11, wherein the ground members cover substantially all of both of said pair of edges opposed to each other of the frame.

15. An information card according to Claim 11, wherein said pair of edge opposed to each other of the frame include guide slope.

16. An information card comprising:  
an external panel having a ground member disposed therein; and  
a seat member protruding in the direction opposed to said ground member.

17. An information card according to Claim 16, wherein the external panel is made of a nickel clad stainless steel material.
